Your new website is up!

Assignment Project Exam Help

Now you scale from
100 users to 100k.

<https://powcoder.com>

Add WeChat powcoder

Solution? Scale out.

But, adding more
servers can get very
expensive.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

A security backdoor
has been discovered
in the server software
that you use.

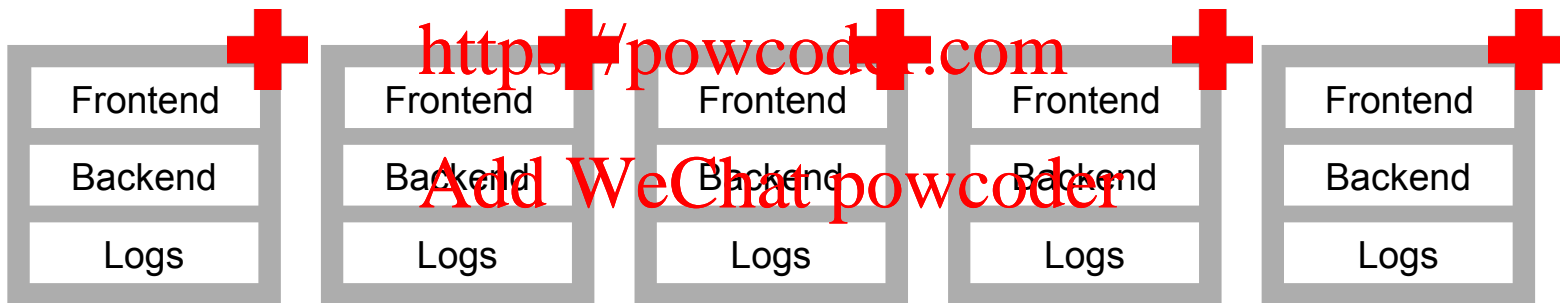

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Solution? Patch all your instances.

Assignment Project Exam Help

Ugh, managing servers
is time consuming.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

You realize your NLP
operations consume too
much memory.

Assignment Project Exam Help

<https://powcoder.com>

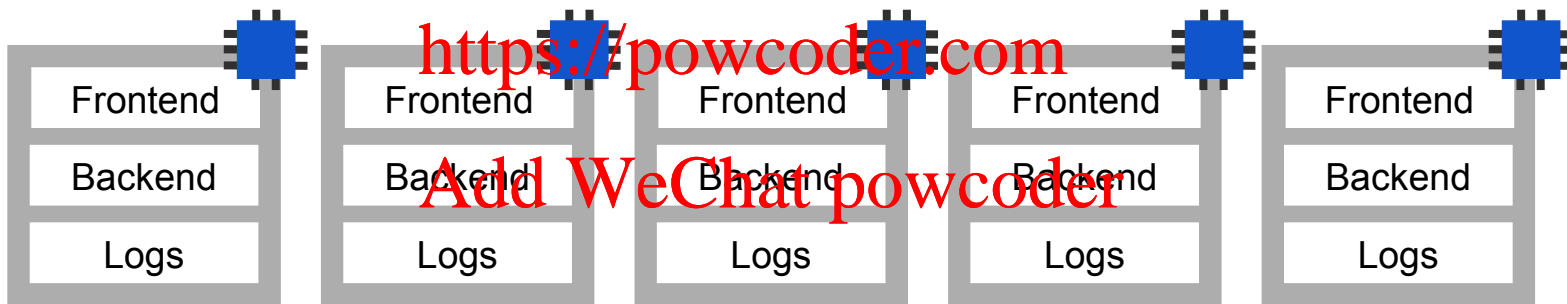

Add WeChat powcoder

Your solution? Increase instance memory.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Everything starts getting
more and more
expensive.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Alex, one of the
developers, decides to
deploy the feature he
has been working on all
week.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

BUT...

<https://powcoder.com>

Add WeChat powcoder

...Sam committed non-
working code to the
master branch.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

The new feature can't be
deployed until Sam fixes
the bugs. Frustrating.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Challenges with Monolithic Systems

- Code complexity and maintainability
- **Deployment becomes the bottleneck**
- Fear to change
- **Lack of ownership**
- Failure dependencies
- **One size doesn't fit all**
- Hard to scale out

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

1. Problems with Monolithic Systems
2. Microservices: A Solution
3. Microservice-driven APIs
4. Scaling the Frontend
5. Asynchronous Workflows

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Microservices to the rescue!

- An architectural pattern
- Split the application into multiple services that:
 - Are small
 - Use simple protocols
 - Are loosely-coupled
 - Can be independently deployed
 - + each can be written in a different language

Benefits of Microservices

Speed

- Faster development & deployments

Innovation

- Autonomy of teams, culture of change
- Ownership and DevOps culture

Quality

- Composability and reusability
- More maintainable code
- Better scaling and optimizations
- Failure Isolation and Resiliency

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Microservices++: Serverless Components

- No servers to manage
- Scalability out of the box
- Minimize codebase size
- Pay per usage
- Extremely low cost (usually fractions of a cent)

DEMO

<https://powcoder.com>

Walkthrough of our Concierge app.

Add WeChat powcoder

Assignment Project Exam Help

Where do I start?

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

Design. <https://powcoder.com> Design.

Add WeChat powcoder

Not (just) UI design

- Stack design
- Architecture design
- Data structure design
- API design

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

API Design

- forces you to think before you build
- drives a good chunk of the architecture
- drives the data structure design
- makes everything more efficient
 - no more “I’m waiting for the backend to be ready before I can start to implement the frontend”
 - minimizes time wasted restructuring the API in future versions

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Yeah ... but building
documentation sucks
and it is time consuming.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help
That's why there's
<https://powcoder.com>
Swagger
Add WeChat powcoder

Swagger

- “The world’s most popular API framework”
- Powerful tool to design, build, document, and consume REST APIs
- Open Source
- User friendly
- Standardized

Check out <http://swagger.io>

Swagger + API Gateway = 

- Seamless API setup
- Import the Swagger configuration into API Gateway
 - endpoints
 - security settings
 - request/response models
 - request/response mapping
 - response codes, etc.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Swagger + API Gateway + Lambda =

- Custom Swagger definitions for Lambda
- Set up a fully integrated and managed API
- Built-in API management features
 - API keys
 - Throttling
 - Security
 - Staging, etc.

Assignment Project Exam Help

DEMO

<https://powcoder.com>

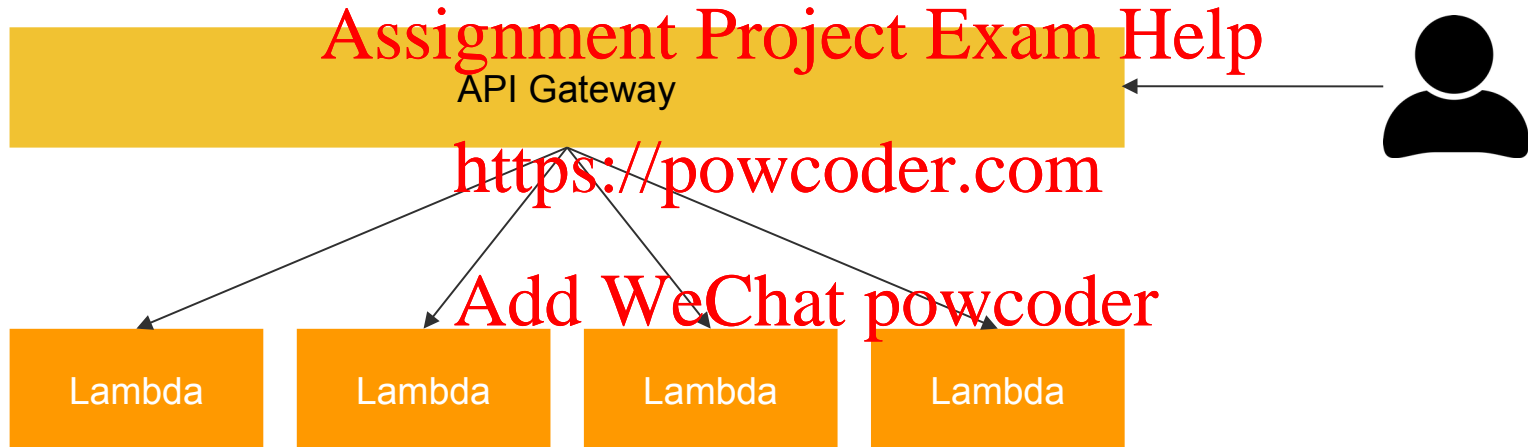

Setup the API using Swagger, API Gateway, Lambda

Add WeChat powcoder

Code Deployment with Lambda

- Using the AWS Web Console
- Using the AWS CLI (preferred)
- Bash script <https://powcoder.com>
- Check out the sample deployment script
 - <https://github.com/mangatanyc/columbia-lecture-concierge/blob/master/backend/deploy.sh>

Our Stack so far

Assignment Project Exam Help

What's missing? <https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help
Our API is accessible by
<https://powcoder.com>
anyone on the internet.
Add WeChat powcoder

IAM: Identity and Access Management

- Fine-grained access control to AWS resources
 - including API Gateway
- Create roles and permissions
- Integrate with your corporate directory
- Uses Access and Secret key pairs for access control
 - Can be used to sign API calls to AWS

Awesome! When was the last
time you signed your API
requests?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Cognito: User Pools & Identity Federation

Cognito: User Pools & Identity Federation

API Gateway Bonus: SDK Generation

- Takes a second to generate
- Support for multiple languages
 - Swift
 - Obj C
 - Java
 - Javascript, and more.
- Abstracts all the API calling complexity, including session signing

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Cognito + IAM + API Gateway = Security [✓]

- Cognito exchanges your session for temporary IAM credentials with limited permissions
- The API Gateway generates SDK signed API requests using the SigV4 signing process
 - Verify the identity of the requester
 - Protect data in transit
 - Protect against potential replay attacks
- Requests are executed with the caller's credentials

Assignment Project Exam Help

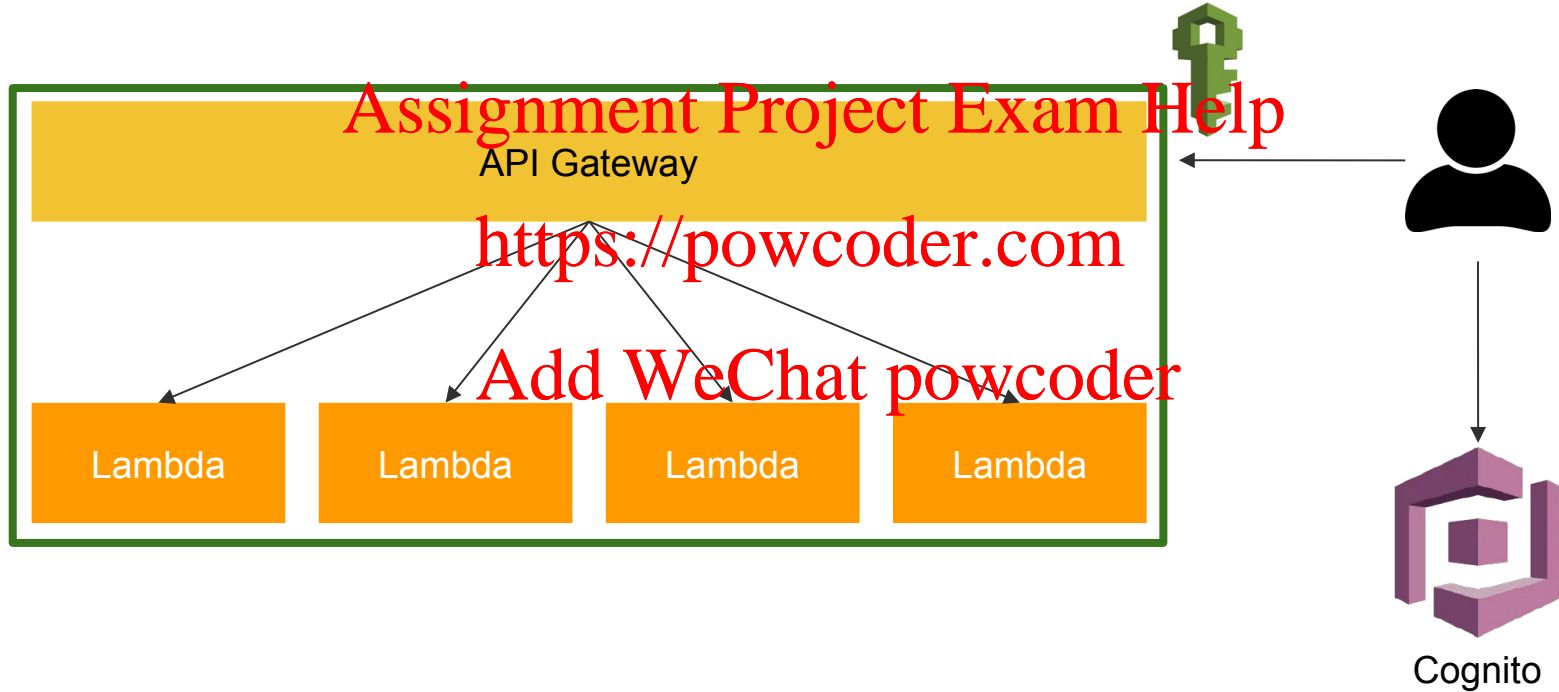

DEMO

<https://powcoder.com>

Integrate Cognito into the frontend application.

Add WeChat powcoder

Now that's looking a lot more secure!

Recap:

1. Use Swagger to design your APIs and documentation
2. API Gateway
 - a. great API management tool
 - b. seamless integration with Swagger
 - c. generates SDKs for your API
3. Lambda
 - a. serverless compute service
 - b. integrates with API Gateway
4. Cognito
 - a. useful for login workflows
 - b. outputs temporary IAM credentials with custom permissions

You want to sell products
through your concierge service.

Add WeChat powcoder

1. Problems with Monolithic Systems
2. Microservices: A Solution
3. Microservice-driven APIs
4. Scaling the Frontend
5. Asynchronous Workflows

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Current Checkout API

- Synchronous
- Overloaded
 - Performs checkout
 - Sends notification to user
 - (and in a proper implementation, it would also write to the db)
- More prone to failure

Asynchronous Checkout

- What? **Assignment Project Exam Help**
 - process credit card transactions asynchronously
- Why? **<https://powcoder.com>**
 - defend against traffic spikes
 - 3rd party services are subject to downtime too
 - defend against programming errors and bugs
 - execute intricate order workflows, without impacting the user experience

The Asynchronous Toolset

Ideas for next steps...

1. Integrate a database (ex. DynamoDB) into the system.
 - a. the database was omitted from the demo to emphasize how you can build a system service by service, rather than building everything at once
2. Integrate a distributed cache (Memcached or Redis) to store the NLU state between requests.
3. Use Route53 to setup the DNS for your domain.
4. Integrate a real NLP engine and the actual Stripe API to the overall system.

Codebase:

<https://github.com/mangatany/columbia-lecture-concierge>

Steps for building the frontend depicted in the demo:

1. download and setup bootstrap template [12.5 min]
 - a. <http://getbootstrap.com/examples/cover/#>
2. create and integrate FB app [15 min]
 - a. <https://developers.facebook.com/docs/facebook-login/web>
3. download and setup chat template [30 min]
 - a. <http://codepen.io/supah/pen/jqOBqp>
4. create S3 bucket with static website hosting [5 min]
 - a. <http://docs.aws.amazon.com/AWS/latest/dev/HostingWebsiteOnS3Setup.html>
5. setup AWS profile using CLI [5 min]
 - a. <http://docs.aws.amazon.com/cli/latest/userguide/cli-chap-getting-started.html>
6. deploy website to S3 [10 min]
 - a. build a bash script that leverages the AWS CLI to upload your static files to S3
 - b. <https://github.com/mangatanyc/columbia-lecture-concierge/>
7. generate Api Gateway SDK [1 min]
8. integrate Api Gateway SDK [15 min]
 - a. <http://docs.aws.amazon.com/apigateway/latest/developerguide/how-to-generate-sdk-javascript.html>
9. setup Cognito Identity Pool [5 min]
10. integrate Facebook login with the Identity Pool [15 min]
 - a. <http://docs.aws.amazon.com/cognito/latest/developerguide/facebook.html>
